Statement: Considering a small domain specific programming language (that we shall call mini-language).

Requirement 1: define BNF for the lexical and syntactic constructs of the language

Requirement 2: document use case – choice of statements: for each statement, construct an explanatory example justifying why the statement is needed

Examples of domain specific: Math computation, data transformation, IoT script, data filtering

Minimal requirements related to the language:

- one simple datatype and one user defined type (array, vector, list aso)

- Statements: assignment, conditional, loop, input/output

Delivery time: 1 week

Deliverables:

- 1 doc containing BNF (keep it one doc as you will need it later. Recommend to be .txt)
- 1 doc - documentation containing use case
