Statement: For the domain specific programming language from Lab 1, perform lexical analysis. Choose between using the tool lex / flex or Python (mandatory using regex)

Input: list of tokens, source program (see lab 2)

Output: Program Internal Form (PIF), Symbol Table (ST), lexical errors

Requirement 1: produce output

Requirement 2: ST management in C – BST or hash table (the data structure must be implemented)

Delivery time: 1 week

Deliverables:

- Source code
- 1 doc – documentation – explain use of tools, lexical tokens detection – identifiers, constants, data structures and operations for ST management
